

Development of LIMITED-MUN Beneficial Use

New option 5* for a LIMITED-MUN **Definition** developed during 9/3 meeting:

Uses of water for municipal and domestic supply in agriculturally dominated surface water bodies where the use is limited by water body characteristics such as intermittent flow, management to maintain intended agricultural use and/or constituent concentrations in the water body.

Additional suggestions:

*Uses of water for municipal and domestic supply in agriculturally dominated surface water bodies where the use ~~is~~ **may be** limited by water body characteristics such as ~~intermittent flow, management to maintain intended agricultural use~~ and/or constituent concentrations in the water body.*

*Uses of water for municipal and domestic supply in agriculturally dominated surface water bodies where the use is limited by water body characteristics such as intermittent flow, management **practices** to maintain ~~intended~~ agricultural uses and/or constituent concentrations in the water body **resulting from agricultural uses**.*

New option 8* for a **Water Quality Objective** developed during 9/3 meeting:

Water quality and downstream beneficial uses will be protected consistent with the state antidegradation policy.

Additional suggestions:

*Water quality ~~and downstream beneficial uses~~ will be protected consistent with ~~the state~~ **and federal** antidegradation policies **and will not create a trend of degradation that impacts any downstream beneficial uses**.*

Water quality of surface waters designated for use as limited MUN shall be maintained to protect the other designated beneficial uses of the water body, and shall not cause degradation of water quality in downstream water bodies that impairs beneficial uses or is inconsistent with the state's antidegradation policy.

*From "Development of LIMITED-MUN Beneficial Use Designation" document provided at the 9/3/15 stakeholder meeting.
